

I rather using VRS/TRS that help me process real fast to communicate with someone. Since TRS using on AIM. VRS that I can use at work and home.

We all are Deaf and cannot use cellular all the time. However that we are appericated how companies offer us to use AIM as our phone to communicate with Hearing. That help me go anywhere in the world that I can carry my pager.

I really dont understand why you dont see what that benefit to us. Because you are hearing and dont feel needy since you used to have everything real accessible. While we are not. We only able to understand what the world is about. World with full of sounds you can get about 90 percent of sounds. While we only get 10 percent sound and what it leave 90 percent silent to us.

Please do not give up on VRS or TRS. We really depend on this tech to communicate with everyone.

Thanks!
